

A Global Marketplace for Consumers: Consumer Policy Series

What prevents an international marketplace from becoming a reality? What prevents a consumer from calling all over the world to purchase goods and services? Will toll-free international calling soon be a reality? Why are parcel delivery services far more expensive internationally than domestically? To what extent can credit card companies settle disputes between consumers and sellers in two different countries? This publication assesses the current situation and proposes solutions for giving the consumer access to a global marketplace.
